

W/ Elements Cloud™

Stop threats you cannot see

Upgrade to EDR and get 12 months of Identity Security – for free.

You've made a smart move by using WithSecure™ Elements Endpoint Protection (EPP), a trusted way to block known threats. But attackers now use many stealthy, sophisticated techniques that can slip past your EPP.

Data breaches now cost organizations an average of \$4.88 million and often go unnoticed for months*. This places a particular burden on mid-sized businesses that typically have lighter defenses and slower response times. To keep up, companies like yours are leveling up their defenses by adopting WithSecure™ Elements Endpoint Detection and Response (EDR):

- Stop threats quickly by tools that detect unusual activity across computers and servers
- Turn insights into action with intuitive dashboards
- Stay ahead of compliance needs like NIS2 with no long-term lock-in, just simple monthly billing.
-

Here is what you gain:

- Build resilience against evolving cyber threats
- Make smarter decisions, take faster action
- Investigate up to 12x faster and cut your incident costs dramatically.

[Upgrade to EDR](#)

P.S. Upgrade now and get 12 months of WithSecure™ Elements Identity Security trial for free. Protect your Microsoft Entra ID identities from attacks using stolen credentials.
