

Get e-signature workflows for your Microsoft Teams ecosystem

Integrate signNow's advanced e-signing capabilities with Microsoft Teams to increase your organization's productivity, delight customers with an easy-to-use interface and save money while maximizing ROI — all without leaving your secure Microsoft Teams environment.

The signNow integration with Microsoft Teams empowers you to:

Initiate e-signature workflows

Send any document stored in Files, OneDrive, or chats to your teammates in a role-based order. No need to enter emails manually – automatically add them from Microsoft Teams contacts. Share a document in a chat so that recipients can instantly open and sign it using signNow.

Save time with templates

Turn any document stored in Files, OneDrive, or chats into a reusable template. Simply open the document, add desired fields such as signature, text, date, or drop-down, and share the template with teammates as many times as needed.

Always stay in the loop

Get instant notifications about document status right in your Microsoft Teams chat. signNow bots will inform you when a document has been signed by all signers and display how many recipients still need to sign.

Access approved documents

Once your document is signed, it will be automatically uploaded to the Microsoft Teams chat where you can open, edit or e-sign it yourself -- all without leaving the Microsoft Teams application.

Key benefits of the signNow for Microsoft Teams integration

Collect e-signatures

Create templates

Get instant updates

Access approved docs

Right from your Microsoft Teams environment

Get started today and see why thousands of customers prefer signNow for its ease of use when sending, signing and storing documents safely and securely.
