

# **BACKUP MICROSOFT 365**

32% of companies have lost data on cloud  
**Protect your business critical data on Microsoft 365**

Prices start at 3.99 €/mo. per user

## Why your Microsoft 365 needs to be protected!

### No Native Backup

Microsoft 365 doesn't offer any native backup other than limited time recycle bin and version history. This presents potential security risks.

### Ransomware

Ransomware can also encrypt all your files on cloud. File sync programs make this scenario even worse.

### Service Interruptions

When Microsoft 365 experiences technical problems, you can log into to Nexetic portal and access the information.

### End User Mistakes

Almost 60% of data loss on cloud is due to end user errors. Accidental file deletions and unwanted changes to shared files can cause excessive damage.

### GDPR

Information is backed up and stored in EU. You are able to restore data fast and reliably.

### Email Archive

Malicious data deletion is a common problem. Also you never know when you need to retrieve an old email for legal cases.

"When production data moves to cloud, many organisations don't realize that they are still responsible for their data no matter where it's located."

Gartner

# YOU CAN GET YOUR CLOUD PROTECTED SOONER THAN YOU THINK.

## One-click configuration

### Easy to start

You don't need to install any software. With one click of a button you can turn on backup for all users and all your data on Microsoft 365.

## Automatic Backup

### All Your Information is Protected 24/7

Backup is automatic so all your data is protected always and everywhere. Automatic backup twice a day.

## Access & Restore

### Restore to your computer. Restore to cloud.

You can restore data to your local computer or back to Microsoft 365 environment. You can also access and restore previous versions. Also deleted emails and files.

## Hassle-free maintenance

### All users in one view

You can see all of your company's Microsoft 365 users in the Nexetic portal. You can for example monitor backups and add new users to backup.

## Safe Haven for Data. Data is Stored in Europe.

Our data centers are located in Europe. All data is encrypted before it is transferred from Microsoft 365 to Nexetic. Data remains encrypted during transmission and in our data centers. Information is encrypted automatically by customer-specific encryption key. Only you can access and restore your information. You can login with Microsoft 365 credentials. Also permissions are inherited from Microsoft 365.
